Abstract

This report summarizes the observations and results of ambient air testing for asbestos, metals and total respirable dust conducted at the various Bay Area Rapid Transit (BART) stations with asbestos-containing fireproofing and/or vinyl asbestos floor tiles and mastics. The monitoring was conducted from April 9-11, 2018. The purpose of monitoring the stations with asbestos-containing fireproofing and/or vinyl asbestos floor tiles and mastic was to determine the level of airborne asbestos in the stations and to assess the potential hazards to occupants.

The sample results revealed airborne asbestos fiber levels were all <0.001 fibers/cc based on Phase Contrast Microscopy (PCM) analyses, with the exception of the sample collected at the Berkeley Station which was overloaded. These results indicate that the airborne asbestos concentration at all sites tested is statistically comparable to background levels, and is not affected by the presence of asbestos-containing construction materials, such as asbestos-containing fireproofing found throughout the structural members.

The downtown San Francisco stations experience black settled dust from the Muni-Metro system sharing a similar tunnel and ventilation system and from rail grinding activities. Airborne sampling was conducted for total respirable dust. In summary, total respirable dust concentrations were found to be as follows:

- Total respirable dust levels at the Embarcadero Center Station's Service Area adjacent to the Bike Room on the Concourse Level had a concentration ranging from 0.006 to 0.109 mg/m^3 with an average concentration of 0.050 mg/m^3, or well under the OSHA Permissible Exposure Limit of 5.0 mg/m^3.
- Total respirable dust levels at the Embarcadero Center Station's Station Agent's Booth on the Concourse Level had a concentration ranging from 0.006 to 0.135 mg/m^3 with an average concentration of 0.061 mg/m^3, or well under the OSHA Permissible Exposure Limit of 5.0 mg/m^3.
- Total respirable dust levels at the Montgomery Station's Fan Room 107 on the Concourse Level had a concentration ranging from 0.016 to 0.102 mg/m^3 with an average concentration of 0.051 mg/m^3, or well under the OSHA Permissible Exposure Limit of 5.0 mg/m^3.
- Total respirable dust levels at the Montgomery Station's Station Agent's Booth on the Concourse Level had a concentration ranging from 0.010 to 0.111 mg/m^3 with an average concentration of 0.044 mg/m^3, or well under the OSHA Permissible Exposure Limit of 5.0 mg/m^3.

Finally, settled dust samples from the Montgomery, Powell and Civic Center Station trackside Fan Rooms were analyzed for metal content with the following results (see Table 1):

- The Montgomery Street trackside settled dust sample collected in Fan Room 305 has an elevated concentration (6,100 mg/kg) of zinc over the TTLC concentration of 2,400 mg/kg and an elevated concentration (7,600 mg/kg) of copper over the TTLC concentration of 2,500 mg/kg; defining this material as a hazardous waste. STLC testing of chromium, copper, lead, nickel and zinc are needed to determine the leachability of these metals. Previous settled dust sampling in 2016 showed similar concentrations for chromium, copper, lead and zinc for this station.
- The Powell Street trackside settled dust sample collected in Fan Room 304 has concentrations under the Title 22 TTLC for each metal (see Table 7). STLC testing of zinc is needed to determine the leachability of this metal, since the result was above 10% of the TTLC standard.
- The Civic Center trackside settled dust sample collected in Fan Room 301A/B has concentrations under the Title 22 TTLC for each metal (see Table 7). STLC testing of chromium, copper and zinc are needed to determine the leachability of these metals, since the results were above 10% of the TTLC standards. Previous settled dust sampling in 2016 showed similar concentrations for chromium, copper and zinc for this station.

Table 1: CAM-17 Settled Dust Analyses

Metal	Montgomery Settled dust TTLC (mg/kg)	Powell Station Settled dust TTLC (mg/kg)	Civic Center Settled dust TTLC (mg/kg)	Title 22 Hazardous Waste TTLC Standard (mg/kg)	Title 22 Hazardous Waste STLC Std. (mg/l)	Comments
Antimony	16	4.8	15	500	1.5	Below Title 22 TTLC Std.
Arsenic	44	3.1	13	500	5.0	Below Title 22 TTLC Std.
Barium	55	61	220	10000	100	Below Title 22 TTLC Std.
Beryllium	ND	ND	ND	75	0.75	Below Title 22 TTLC Std.
Cadmium	2.4	4.1	26	100(1)	1.0	Below Title 22 TTLC Std.
Chromium	270	21	93	500 (CrVI)	5	Below Title 22 TTLC Std.
Cobalt	47	3.4	17	8000	80	Below Title 22 TTLC Std.
Copper	**7,600(1)**	160	610	2,500	25	**Above Title 22 TTLC Std. for Montgomery**
Lead	280	43	81	1,000	5.0	Below Title 22 TTLC Std.
Mercury	0.11	ND	0.084	20	0.2	Below Title 22 TTLC Std.
Molybdenum	33	4.1	20	3500	350	Below Title 22 TTLC Std.
Nickel	1300	16	120	2000	20	Below Title 22 TTLC Std.
Selenium	ND	ND	ND	100	1.0	Below Title 22 TTLC Std.
Silver	1.3	ND	ND	500	5	Below Title 22 TTLC Std.
Thallium	ND	ND	ND	700	7.0	Below Title 22 TTLC Std.
Vanadium	9.1	8.9	37	5000	24	Below Title 22 TTLC Std.
Zinc	**6,100(1)**	1,900	1,300	2400	250	**Above Title 22 TTLC Std. for Montgomery**

NR = None Recorded

ND = None Detected

(1) Requires STLC and TCLP analyses to fully characterize waste disposal requirement, but generally is considered a hazardous waste

Table of Contents

1.0 Introduction

This report summarizes the sampling results collected during the ambient air monitoring for asbestos conducted in the Bay Area Rapid Transit's system-wide stations with asbestos-containing fireproofing. The airborne asbestos sampling included the following stations:

- Powell Street Station, San Francisco, CA
- Montgomery Street Station, San Francisco, CA
- 12th Street Station, Oakland, CA
- 19th Street Station, Oakland, CA
- MacArthur Station, Oakland, CA
- Berkeley Main Station, Berkeley, CA
- Ashby Station, Berkeley, CA
- 16th Street Station, San Francisco, CA
- 24th Street Station, San Francisco, CA
- Rockridge Station, Oakland, CA
- Lafayette Station, Lafayette, CA

SCA Environmental, Inc. (SCA) conducted the monitoring from April 9, 2018 to April 11, 2018 at the request of the Bay Area Rapid Transit District's System Safety Department.

Portions of the systems' structural steel are protected with fireproofing that contains 5 to 10% Chrysotile asbestos. In addition, several other construction materials contain asbestos (including various vinyl floor tiles and mastics in various Train Control Rooms throughout the legacy stations. Asbestos is regulated as a respiratory carcinogen. In order to verify that the operations and maintenance program implemented for this building are working properly, testing for the levels of airborne asbestos fibers is conducted periodically.

2.0 Methodology

Asbestos

Ambient air samples for asbestos were collected at the following stations and quantities:

San Francisco
- Powell Street Station (2)
- Montgomery Street Station (2)

Oakland
- 12th Street Station (1)
- 19th Street Station (1)
- MacArthur Station (1)
- Berkeley Main Station (1)
- Ashby Station (1)

M-Line
- 16th Street (1)
- 24th Street (1)

C-Line
- Rockridge (1)
- Lafayette (1)

All the asbestos samples were analyzed by Phase Contrast Microscopy (PCM), except for the project blanks, in accordance with the National Institute for Occupational Safety and Health (NIOSH) method 7400. PCM results are calculated in fibers per cubic centimeter (f/cc).

All air samples were collected for an approximately 24 hour period using Buck Libra low flow, AC-operated or similar air pumps to maintain even flow rates. Samples were collected on Zefon International Inc. Model Z008BA 25-millimeter, 0.8-micrometer pore size, mixed cellulose ester membrane filters in open-faced cassettes with conductive cowls. Pump flow rates were calibrated against a primary standard.

The contract laboratories that provided analytical asbestos services for the project are summarized below:

Laboratory	Analysis Type	Accreditation
EMSL Analytical, Inc. San Leandro, CA	Phase Contrast Microscopy (PCM) and Polarized Light Microscopy (PLM) Asbestos Analyses	• National Voluntary Laboratory Accreditation Program (NVLAP # 101048-3). • California Environmental Laboratory Accreditation Program (ELAP #1620).

Respirable Dust

Ambient sampling for total respirable dust was conducted at two downtown San Francisco stations, which experience black settled dust deposits associated with the Muni-Metro system within the same tunnels and ventilation system and wheel grinding activities. Total respirable dust sampling was conducted at:

- Montgomery Street Station, San Francisco, CA
- Embarcadero Station, San Francisco, CA

Particulate readings were made utilizing a TSI Dust-Trak, which measures respirable dust or PM_{10} levels. Measurements are reported as mg/m^3.

Particulate matter (PM) is a complex mixture of tiny particles that consists of dry solid fragments, solid cores with liquid coatings, and small droplets of liquid. These particles vary greatly in size, shape and chemical composition,

and can be made up of many different materials, such as metals, settled dust, soil, dust, mold and fungi. Particles 10 microns or less in diameter are defines as "respirable particulate matter" or PM_{10}. Fine particles are 2.5 microns or less in diameter ($PM_{2.5}$) and can contribute significantly to regional haze and reduction in visibility.

Spot Particulate Sampling.

In addition to the longer-term respirable dust sampling at the two BART stations noted above, SCA conducted spot sampling at agent booths, ticket machines and trackside to determine typical PM_{10} and $PM_{2.5}$ concentrations for BART passengers and employees. Stations sampled included 24th Street through Embarcadero in San Francisco.

Particulate readings were made utilizing a TSI Dust-Trak, which measures $PM_{2.5}$ and PM_{10} levels.

Settled Dust Sampling

CAM-17 metal analyses were completed for settled dust samples collected in the Montgomery, Powell and Civic Center track beds by EPA Method 6010B/7470A by McCampbell Analytical Inc.'s ELAP-accredited laboratory in Pittsburg, CA. PLM analysis for asbestos was also conducted at the Berkeley Station Break Room 108.

3.0 Applicable Standards

Asbestos

A summary of airborne asbestos standards applicable to this project is tabulated in Table 2 as follows:

Table 2: Summary of Asbestos Standards

Source	Level	Nature	Comments
Cal/OSHA[1]	0.1 f/cc 1.0 f/cc	Occupational & mandatory	8-hour Time Weighted Average (TWA) Permissible Exposure Level (PEL) (triggers OSHA required training, medical examinations, etc.) Excursion Limit (EL) for 30 minutes sampling duration
NIOSH[2]	0.1 f/cc	Recommended	Occupational PEL
ACGIH[3]	0.2 f/cc	Recommended	Occupational Threshold Limit Value (TLV) Notice of Intended Changes
Calif. Prop 65[4]	vague	Mandatory	Standard and monitoring method are unclear, but generally interpreted as comparable to outside ambient air
Bay Area Rapid Transit	0.01 f/cc (PCM) 70 str/mm^2 (TEM)	Contractual & mandatory Contractual & mandatory	Ambient air action level for occupied areas via PCM. Originating from AHERA[5] regulations and adopted by Bay Area Rapid Transit. Ambient air action level for occupied areas via TEM. Originating from AHERA[5] regulations and adopted by Bay Area Rapid Transit.

1 California Department of Industrial Relations, Division of Occupational Safety and Health, 8 CCR 1529.
2 National Institute of Occupational Safety and Health
3 American Conference of Governmental Industrial Hygienists, 2004
4 California Proposition 65
5 Asbestos Hazard Emergency Response Act (AHERA); 40 CFR Part 763

Respirable Dust

Extensive research indicates that exposure to PM_{10} and $PM_{2.5}$ levels exceeding current air quality standards is associated with increased risk of hospitalization for lung and heart-related respiratory illness, including emergency room visits for asthma. PM exposure is also associated with increased risk of premature deaths, especially in the elderly and people with pre-existing cardiopulmonary disease. In children, studies have shown associations between PM exposure and reduced lung function and increased respiratory symptoms and illnesses.

Table 3 below summarizes the applicable published Cal/OSHA and ACGIH permissible exposure limits for respirable dust as well as the California Air Resources Board's standards. Note that some of the addressed standards cover office environments and are not occupational exposure standards for BART station employees. In addition, many of these standards are arithmetic mean levels over a 24-hour or annual period; therefore, exposure within the BART system needs to be time-weighed against other daily or annual exposures outside the BART system.

Table 3: Summary of Respirable Dust Standards

Contaminant	Source	Level	Nature	Comments
Particulate	N/A	ambient	N/A	Compare against outdoor readings to indicate effectiveness of filter units in air handling system
	Cal/OSHA[1]	5 mg/m^3	Mandatory/ Occupational	8-hour TWA PEL for respirable dust
		10 mg/m^3		8-hour TWA PEL for total dust
	ACGIH[2]	10 mg/m^3	Recommended/ Occupational	8-hour TWA TLV resulting in lung disorders
	EPA[3]	0.05 mg/m^3	Recommended/ Indoor Occupancy (Offices)	National Ambient Air Quality Standard
Respirable Particles (PM_{10})	ASHRAE[4]	0.05 mg/m^3	Recommended Indoor Occupancy (Offices)	Based on protecting office environments against respiratory morbidity in the general population and avoiding exacerbation of asthma with no carcinogens. Indoor concentrations are normally lower. Guideline level may lead to unacceptable deposition of "dust."
	CARB[5]	0.05 mg/m^3	Recommended by CARB	24 hour California Air Resources Board Maximum Indoor Level
		0.02 mg/m^3		Annual arithmetic mean level
	EPA[3]	0.15 mg/m^3	Recommended by LEED Program (for Offices)	National Ambient Air Quality Standard
	LEED[6]	0.05 mg/m^3	Recommended by LEED Program (for Offices)[6]	8-hour TWA PEL for respirable dust for office environments using a TSI Sidepak Aerosol Monitor or PEM Sampler with PM_{10} lab analyses
Respirable Particles ($PM_{2.5}$)	CARB[5]	0.02 mg/m^3	Recommended by CARB	Annual arithmetic mean level
	EPA[3]	0.035 mg/m^3	Recommended by EPA	24-hr arithmetic mean level

CAM-17 Metals

Total Threshold Limit Concentrations (TTLC), Soluble Threshold Limit Concentrations (STLC), and Toxicity Characteristic Leaching Procedure (TCLP) limits are published under Title 22 of the California Code of Regulations §662261.24 for classifying hazardous waste. Applicable standards for the CAM-17 metals are included in Tables 1, 7 and 8 herein.

4.0 Results and Discussion

Asbestos

Sampling was conducted as part of the BART's Ambient Air Quality Monitoring Program, since the listed stations have asbestos-containing fireproofing. Sampling was conducted for an approximately 24-hour period from April 9 to April 10, 2018 in the San Francisco stations and April 10 to April 11, 2018 in the East Bay Stations.

At the request of Ms. Andrea Eneidi, CSP within BART's System Safety Department, SCA Environmental, Inc. (SCA) conducted visual inspections and ambient air testing. SCA's Environmental Scientist, Mr. Chaowen "Stanley" Huang (Certified Site Surveillance Technician #16-5737), conducted work under the direct supervision of Mr. Dan Leung, CIH, CSP of SCA. Mr. Leung is a Cal/OSHA registered Certified Asbestos Consultant (CAC #07-4175) and a Certified Industrial Hygienist (CIH).

The ambient air sampling results for the Stations are summarized in Table 4 below. The laboratory reports and field data sheets are included as Attachment 1. All observed asbestos-containing fireproofing was noted to be in "good" condition. No notable areas of imminent danger were observed within the representative areas viewed by SCA's Surveyor. Asbestos fireproofing on the Concourse Level of the Powell Street Station was significantly abated since the prior ambient air sampling in May 2011.

Background airborne fiber concentrations by PCM were as follows:

Table 4: Summary of Airborne Asbestos Results

Station	Location	Sample I.D.	Results (fibers/cc)	Comments
Lafayette	Train Control Room 103	LAF-TC103	<0.001	Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc
Rockridge	Janitor's Room 203	ROCK-203	<0.001	Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc
MacArthur	Break Room 102	MAC-102	<0.001	Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc
Berkeley	Break Room 108	BERK-108	Overloaded	**Above the EPA's PCM Clearance Air Standards of 0.01 f/cc**
Ashby	Elevator Room 204	ASH-204	<0.001	Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc
19th St. Oakland	Mech. Room 108A	19-108A	<0.001	Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc
12th St. Oakland	Electrical Room 107C	12-107C	<0.001	Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc
Montgomery	Coffee Shop Storage/Elect Room 110.	MONT-110	<0.001	Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc
Montgomery	Storage Room 111	MONT-111	<0.001	Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc
Powell	Police Break Room	POW-POL-BK	<0.001	Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc
Powell	Electrical Room 110	POW-110	<0.001	Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc
16th St. Mission	Mech. Room 101A	16-101A	<0.001	Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc
24th St. Mission	Mech. Room 101A	24-101A	<0.001	Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc

All ambient station air samples were below BART's Perimeter Action Level of 0.01 fibers per cubic centimeter (fibers/cc), with the exception of the sample collected at the Berkeley Break Room 108 which was overloaded. The results were generally found to be comparable to the previous sampling rounds completed by SCA and other Consultants.

Respirable Dust (PM_{10})

SCA sampled for respirable dust at two San Francisco Stations to determine typical airborne dust concentrations. Sampling occurred during typical daytime and nighttime operations with the fans on as well as overnight. The purpose of this sampling was to determine the concentrations of black carbon settled dust arising from the Muni-Metro system, which shares a common ventilation system.

Total respirable dust concentrations were found to be as follows:

Table 5: Respirable Dust Concentrations

Location	Start Date	Sampling Time	Respirable Dust Concentration			Permissible Exposure Limit (mg/m^3)	Comments
			Max. Level (mg/m^3)	Min. Level (mg/m^3)	Average Level (mg/m3)		
Embarcadero Concourse Level Northeast Station Agent's Booth	4/10/18	18:30 hrs.	0.109	0.006	0.050	5.0	Well Below 8-hr. PEL
Embarcadero Concourse Level South Station Agent's Booth	4/10/18	19:00 hrs.	0.135	0.006	0.061	5.0	Well Below 8-hr. PEL
Montgomery Platform Level Station Fan Room 107	4/9/18	22:00 hrs.	0.102	0.016	0.051	5.0	Well Below 8-hr. PEL
Montgomery Concourse Level South Station Agent's Booth	4/9/18	22:50 hrs.	0.111	0.010	0.044	5.0	Well Below 8-hr. PEL

All sample results were found to be well under Cal/OSHA's occupational exposure standard of 5.0 mg/m^3.

Spot PM_{10} and $PM_{2.5}$ Reading

The results of spot PM_{10} and $PM_{2.5}$ readings for various San Francisco Line stations are presented in Table 6.

Table 6: Spot PM_{10} and $PM_{2.5}$ Readings

Source: (1) California Environmental Protection Agency Air Resources Board, April 25, 2005
http://www.arb.ca.gov/research/aaqs/caaqs/pm/pm.htm
(2) Table AC-1 Permissible Exposure Limits for Chemical Contaminants
https://www.dir.ca.gov/title8/5155table_ac1.html

None of the spot measurements found PM_{10} levels exceeding Cal/OSHA's 8-hr. Permissible Exposure Limit of 5.0 mg/m^3; Cal/OSHA has no established occupational standard for $PM_{2.5}$. While the short-term $PM_{2.5}$ exposures exceed the EPA/CARB level of 0.35 mg/m^3, the EPA/CARB standard is an annual average concentration. Passengers and employees need to weigh their exposures outside of the station with the time-weighted exposures indoors. Note that the airborne levels within the BART system largely contain carbon, cellulose, silica and iron as contaminants, based on previous bulk sample analyses.

Cleanup of the stations with HEPA-filtered vacuums would help reduce the airborne dust concentrations. Use of power washing would require proper filtering and disposal of the waste water because of its metal content.

Settled Dust

Settled dust samples were collected within the trackside fan rooms at three San Francisco Stations to determine their metal content. Analyses were completed by McCampbell Analytical Inc.'s ELAP-accredited laboratory. The results of the CAM-17 analyses are as follows:

Table 7: Settled Dust CAM-17 TTLC Metal Analyses

CAM-17 Metal	Sample MONT-305		Sample POWELL-304		Sample CIVIC-301A/B		Title 22 Hazardous Waste TTLC/ STLC Standard*
	TTLC (ppm)	STLC/ TCLP (mg/l)	TTLC (ppm)	STLC/ TCLP (mg/l)	TTLC (ppm)	STLC/ TCLP (mg/l)	
Antimony	16	N/A	4.8	N/A	15	N/A	500 / 15
Arsenic	44	N/A	3.1	N/A	13	N/A	500 /5.0
Barium	55	N/A	61	N/A	220	N/A	10000 / 100
Beryllium	ND	N/A	ND	N/A	ND	N/A	75 / 0.75
Cadmium	2.4	N/A	4.1	N/A	26	N/A	100 / 1.0
Chromium	270	TBD	21	N/A	93	TBD	500 (CrVI) / 5
Cobalt	47	N/A	3.4	N/A	17	N/A	8000 / 80
Copper	**7,600**	TBD	160	N/A	610	TBD	2500 / 25
Lead	280	TBD	43	N/A	81	N/A	1,000 / 5.0
Mercury	0.11	N/A	ND	N/A	0.084	N/A	20 / 0.2
Molybdenum	33	N/A	4.1	N/A	20	N/A	3500 / 350
Nickel	1300	TBD	16	N/A	120	N/A	2000 /20
Selenium	ND	N/A	ND	N/A	ND	N/A	100 / 1.0
Silver	1.3	N/A	ND	N/A	ND	N/A	500 / 5
Thallium	ND	N/A	ND	N/A	ND	N/A	700 / 7.0
Vanadium	9.1	N/A	8.9	N/A	37	N/A	2400/ 24
Zinc	**6,100**	TBD	1,900	TBD	1,300	TBD	5000 / 250

ND = None Detected
N/A = TTLC results under 10% of standard, so extraction testing is not required
TBD = To Be Determined
TTLC = Total Threshold Limit Concentration in ppm or mg/kg
STLC = Soluble Threshold Limit Concentrations in mg/liter
TCLP = Toxicity Characteristic Leaching Procedure in mg/liter

The results of the CAM-17 analyses are as follows:

- The Montgomery Street trackside settled dust sample has an elevated concentration (6,100 mg/kg) of zinc over the TTLC concentration of 5,000 mg/kg and an elevated concentration (7,600 mg/kg) of copper over the TTLC concentration of 2,500 mg/kg; defining this material as a hazardous waste. STLC testing of chromium, copper, lead, nickel and zinc are needed to determine the leachability of these metals. Previous settled dust sampling in 2016 showed similar concentrations for chromium, copper, lead and zinc for this station.
- The Powell Street trackside settled dust sample has concentrations under the Title 22 TTLC for each (see Table 7). STLC testing of zinc is needed to determine the leachability of this metal, since the result was above 10% of the TTLC standard.
- The Civic Center trackside settled dust sample has concentrations under the Title 22 TTLC for each (see Table 7). STLC testing of chromium and zinc are needed to determine the leachability of these metals. Previous settled dust sampling in 2016 showed similar concentrations for chromium, copper, and zinc.

Polarized Light Microscopy (PLM) analyses for asbestos for the Berkeley Station Break Room 108 found the following results:

Table 8: Bulk Asbestos Analysis

Sample I.D.	Location	Asbestos content	Comment
BERK-108-FLMAS	Berkeley Station Break Room 108	None detected in tile; 3% CH in black mastic	None detected in tile; 3% CH in black mastic

Note that airborne metal analyses were not conducted for the San Francisco stations in 2016 as the prior sampling found airborne metal concentrations to be relatively low. For informational purposes the metal concentrations in May 2011 for the Powell, Montgomery and Embarcadero Stations were as follows:

- Airborne lead concentrations during the sampling periods all fell below 0.014 µg/m^3, or less than the analytical detection limit. All perimeter airborne lead concentrations fell well below Cal/OSHA's Action Level or Permissible Exposure Level (PEL) of 30 µg/m^3 and 50 µg/m^3, respectively, as well as the National Ambient Air Quality Standard (NAAQS) of 1.5 µg/m^3.

- Airborne iron concentrations during the sampling period ranged from <4.6 to 80 µg/m^3. All airborne iron concentrations fell well below Cal/OSHA's Permissible Exposure Level (PEL) of 5,000 µg/m^3.

- Airborne copper concentrations during the sampling period ranged from <0.11 to 1.1 µg/m^3, or well below Cal/OSHA's Permissible Exposure Level (PEL) of 100 µg/m^3 for copper fume.

- Airborne zinc concentrations during the sampling period all fell below 1.4 µg/m^3, or less than the analytical detection limit, or well below Cal/OSHA's Permissible Exposure Level (PEL) of 5,000 µg/m^3 for zinc fumes.

- Airborne nickel concentrations during the sampling period ranged from <0.11 to 0.39 µg/m^3, or well below Cal/OSHA's Permissible Exposure Level (PEL) of 1,000 µg/m^3.

- Airborne chromium concentrations during the sampling period all ranged from 0.12 to 0.21 µg/m^3, or well below Cal/OSHA's Permissible Exposure Level (PEL) of 500 µg/m^3.

INSTRUCTIONS TO LAB (delete items not applicable AND circle items applicable):

1. Pickup requested:
   Contact: _____
   Time of Call: _____
2. **Call contact to acknowledge receipt of samples.**
3. **Analyze samples by PCM only.**
4. Analyze inside samples by PCM first; if any sample >0.01 f/cc, contact program manager.
5. **If all samples are <0.01 f/cc, proceed with items 6, 7 or 8, as noted.**
6. Analyze inside samples only; stop if Avg >70 str/mm^2, contact PM before analyzing outsides or blanks.
7. **Analyze all samples, including outside samples and blanks.**
8. **Do NOT analyze outside or blank samples.**
9. **Analyze by TEM only the inside air sample with the highest PCM result.**
10. Serial analysis; stop at first positive (>1%); first trace (<0.1%);except sheetrock and plaster samples.
11. **Analyze all bulk samples, unless otherwise indicated.**
12. **PCB: <25 PPM detection limit required. Authorized to perform cleanup to meet the detection limit.**
