INTRODUCTION

BART's Customer Satisfaction Study is a tool to help BART prioritize efforts to achieve high levels of customer satisfaction. The study entails surveying BART customers every two years to determine how well BART is meeting customers' needs and expectations. These surveys, initiated in 1996, are conducted by an independent research firm.

BART management and staff use customer satisfaction surveys to focus on specific service areas and issues important to BART customers. Making informed choices allows BART to better serve current riders, attract new customers, and enhance the quality of life in the Bay Area.

This report is based on 6,700 questionnaires completed by BART customers. These customers were surveyed while riding on randomly selected BART cars during all hours of operation on weekdays and weekends during a two-week period in September 2012.

The following Executive Summary highlights the most salient findings of the survey. Subsequent sections present detailed analyses of the factors that influence customer satisfaction and a full description of the survey methodology, including a copy of the questionnaire.

The initial survey questions ask customers to describe their use of the system. Customers are then asked three key opinion tracking questions focusing on:

- Overall satisfaction;
- Willingness to recommend BART; and
- Perceptions of BART's value for the money.

In addition, the survey probes for ratings of 48 specific service attributes, ranging from on-time performance to station cleanliness. BART uses the service attribute ratings to set priorities for customer satisfaction initiatives.

It should be noted that a number of changes have occurred since the 2010 study. Those which might influence customer perception include:

- A recovering local economy evidenced by falling unemployment and increased BART ridership. Specifically:
 - Unemployment in the three-county BART District decreased from 10.6% in September 2010 to 8.1% in September 2012;
 - Average weekday ridership topped 400,000 for the first time in BART's history, which represented a 14% increase between the two survey periods. This impacted seat availability and train crowding, especially during peak commute periods.
- Replacement of BART's upholstered wool seat coverings with vinyl seat coverings, which are easier to keep clean. This change was made in response to customers' concerns about seat cleanliness. At the time of the survey, approximately 25% of the fleet had the new vinyl seats.
- Continued replacement of carpeting in train cars with hard surface flooring, which is easier to keep clean.
- An evening service increase on the Richmond-Millbrae line in September 2012. Four additional trains in each direction were added between 7 p.m. and 8 p.m. in order to meet growing ridership demands.

- An increase in average gasoline prices from about \$3.10/gallon in September 2010 to about \$4.20/gallon in September 2012.
- A pilot program in August 2012, which temporarily lifted many restrictions on bringing bicycles onboard BART trains on Fridays.
- An unusually large number of escalator outages in summer 2012 which drew media attention to BART's aging equipment and other issues due to weather, vandalism, and homelessness.
- A relatively small fare increase of 1.4% in July 2012.
- The elimination of the EZ Rider card for fare payment and increased adoption of the Clipper Card. At the time of the survey, greater than half (51%) of average weekday BART trips were made using a Clipper Card.
- Extensive rider and community outreach to gather input for the "Fleet of the Future," new train cars which will replace BART's current fleet.
- An incident at the Civic Center Station in July 2011 in which a BART Police Officer fatally shot a man armed with a knife. This triggered a series of protests, some of which impacted train service. Prior to one such planned protest, BART disabled cell phone service on portions of its system. This was followed by more protests and ultimately resulted in a Board-adopted policy regarding cell phone service interruption within the BART system.
- The opening of BART's 44th station, West Dublin/Pleasanton, in February 2011.

EXECUTIVE SUMMARY

BART continues to be generally well regarded by its customers:

- Overall satisfaction among riders is 84%. Only 5% say they are dissatisfied with BART's services.
- 93% definitely or probably would recommend BART to a friend or out-of-town guest.
- 70% agree strongly or somewhat that "BART is a good value for the money."

Ratings on all three key tracking questions increased over the past two years. Overall satisfaction is up two percentage points vs. 2010 (from 82% very or somewhat satisfied to 84%), and perception of value for the money is up six points (from 64% strongly or somewhat agree to 70%). The increases in the overall scores are due to gains in the top ratings (e.g., "very satisfied," "agree <u>strongly</u>"). While customers' overall willingness to recommend BART remains relatively flat at 93%, the top rating (those who would "<u>definitely</u> recommend" BART) has increased from 65% to 69%.

| Percent of BART customers saying | 2008 | 2010 | 2012 |
|--|------|------|------|
| They are very satisfied | 42% | 36% | 40% |
| They would definitely recommend BART | 70% | 65% | 69% |
| They agree strongly that BART is a good value for the money | 32% | 24% | 30% |

Customers in all demographic and behavioral groups give generally positive satisfaction ratings to BART. These segments include: weekday peak, weekday off-peak, and weekend customers; frequent and infrequent riders; and customers of all ages, genders, ethnicities, and income levels.

Most BART riders have other options for transportation. Only 17% of BART riders would not make their trip if BART were unavailable. Nearly half (48%) could have driven (by themselves or in a carpool) instead of using BART on their surveyed trip. Thirty-four percent could have taken a bus or some other form of public transit. Given the high percentage of "choice riders" (those who have transportation options other than BART), it is essential for BART to provide good value to its riders. Ridership levels are somewhat correlated with customer perception of BART as a good value for the money.

Among ratings of specific service attributes, the highest-rated and lowest-rated attributes are relatively consistent with the last survey. The highest-rated attributes are: *availability of maps/schedules, on-time performance, Clipper Cards (new on 2012 survey), BART tickets (new on 2012 survey), and timeliness of connections between BART trains.* The lowest-rated attributes are: *restroom cleanliness, presence of BART Police on trains, presence of BART Police in parking lots, condition/cleanliness of seats on trains, and elevator cleanliness.* Note that ratings of elevator cleanliness declined vs. 2010 as discussed on the next page.

EXECUTIVE SUMMARY (continued)

Among the 45 attributes that can be compared against 2010 results¹, 24 were statistically flat as compared to 2010 (refer to Appendix C for details). Among the remaining attributes:

- 11 attributes had statistically significant declines, ranging from -4.6% to -1.1%;
- 10 attributes had statistically significant increases, ranging from 1.1% to 4.7%.

Among the ratings with the biggest declines, most relate to cleanliness or maintenance. The ratings with the biggest declines are *Escalator availability and reliability, Elevator cleanliness, Station cleanliness, Availability of seats on trains, and Elevator availability and reliability.*

In the months preceding the survey, BART had experienced an unusually high number of escalator outages. At one point, 28 of BART's 179 escalators were out of service. As twelve of these were in busy downtown San Francisco stations, the impacts of the out-of-service escalators were widely felt. One main factor contributing to these outages is aging equipment – most of BART's escalators are 40 years old and will soon be due for replacement or a major overhaul. Additionally, issues due to weather, vandalism, and homelessness impact escalator availability. BART has both short-term and long-term plans to improve escalators. Over the summer, BART brought in additional staff and contractors to speed up escalator repair time, particularly on the heavily used San Francisco escalators. These efforts led to an improvement in escalator availability. BART is planning to replace or overhaul the escalators in the next five to six years to improve reliability. BART is also exploring building enclosures around the entrances of busy street level escalators. These would protect the escalators from the weather and prevent loitering in station entrances during non-service hours.

With regard to elevator cleanliness, BART instituted a program in which Station Agents inspect elevators every two hours and catalog the results. Also, BART recently installed signage in the elevators asking customers to alert a Station Agent if there is a cleanliness issue. These changes should result in cleaner elevators for BART's customers.

The decline in Station Cleanliness ratings is likely due to increased stress on the system due to increased ridership. Compounding this, BART actually has fewer workers to clean its stations than it did 10 years ago due to budget cuts. In the next budget year, BART plans to dedicate more resources to improving the station environment for customers, including hiring more station cleaners. It is also likely that customers took the areas around stations into account when rating station cleanliness. Some customers mentioned that they frequently encountered people sleeping or panhandling at station entrances and on trains. BART is currently working with community groups in San Francisco's Civic Center area and Mission District to improve the station / plaza environments in these areas and address issues pertaining to loitering around stations.

Ratings of seat availability have declined due to the large increase in BART's average weekday ridership. Compared to the 2010 survey period, BART ridership was up 14% in 2012. That's an additional 48,000+ passengers on the trains every day. While BART has been modifying its cars to make more room for passengers, this has involved removing some seats to create more open space. Long-term, as BART replaces its fleet with new train cars, it plans to expand the size of its fleet from 669 cars to 1,000 cars. This will result in an overall increase in seat availability, fleetwide.

¹Two attributes added to the 2012 survey ("Clipper Cards" and "BART tickets") can't be compared against 2010 data. Also note that one attribute was re-worded to be more specific: "Helpfulness and Courtesy of BART Personnel" was changed to "Helpfulness and Courtesy of Station Agents" on the 2012 survey.

The ratings with the biggest increases are Noise level on trains, On-time performance of trains, Leadership in solving regional transportation problems, Condition/Cleanliness of seats on trains, and Comfort of seats on trains.

After hitting a low point in 2010, customers' ratings of *Noise level on trains* rebounded, with an increase of 4.7%. One factor contributing to this improvement is increased rail grinding. BART has been able to improve the availability of both of its rail grinders by making maintenance improvements to the equipment, enabling BART to increase the number of track miles ground. It should be noted, however, that while ratings of this attribute improved, it continues to be one of the lowest rated attributes (in the bottom quintile). BART continues to explore ways to address track noise. Planned improvements include:

- scheduling rail grinding based on system-wide noise mapping and analysis, allowing BART to concentrate its efforts where they will have the most impact;
- implementing an optimal rail profile to reduce wear and corrugation (ripples on the rail which increase noise).

Long-term, BART is exploring using a different type of door technology for its new train cars, which is expected to noticeably reduce noise levels on trains.

On-time performance, a key driver of overall customer satisfaction, has consistently been among the top three ranked attributes since 2000. With this year's increase, it hit an all-time high rating in terms of customers' perceptions. The improved perceptions track well with BART's actual performance metrics, which also showed an increase in on-time performance statistics between the two survey periods.

Customers tend to think of BART's *leadership in solving regional transportation problems* in terms of BART's overall impact on the region. Since BART carries many thousands of riders, provides fast and frequent service, and covers multiple counties, customers have stated that BART eases traffic and congestion, regional transportation problems. Thus, the increase in this attribute may be related to BART's ridership increase.

The increases in ratings of train seats show that BART's investment in new vinyl seats appears to be paying off. Passengers who were surveyed on trains with vinyl seats gave significantly higher ratings to seat condition/cleanliness than passengers on trains with upholstered wool seats. At the time of the survey, about 25% of the fleet was outfitted with the new seats. As BART continues to replace seats, it is expected that seat ratings will continue to improve.

Looking forward, BART expects to serve even greater numbers of customers as the economy continues to improve and the system expands. Average weekday ridership has been increasing for the past couple of years, reaching a historic high of nearly 417,000 trips in October 2012. New projects expected to open within the next couple of years include BART's 45th station, Warm Springs / South Fremont (expected opening: late 2015) and the Oakland Airport Connector, an Automated Guideway Transit system directly connecting the Coliseum BART station with the Oakland International Airport (expected opening: late 2014). One of the major challenges BART faces is continuing to provide its growing customer base with fast, reliable service with its aging train cars, stations, and equipment. BART is currently working on replacing its entire fleet of train cars, but it has many other unfunded capital needs which will need to be addressed to continue to meet the needs of the Bay Area.

DETAILED RESULTS

OVERALL SATISFACTION - TRENDING

(2008 / 2010 / 2012 Comparison)

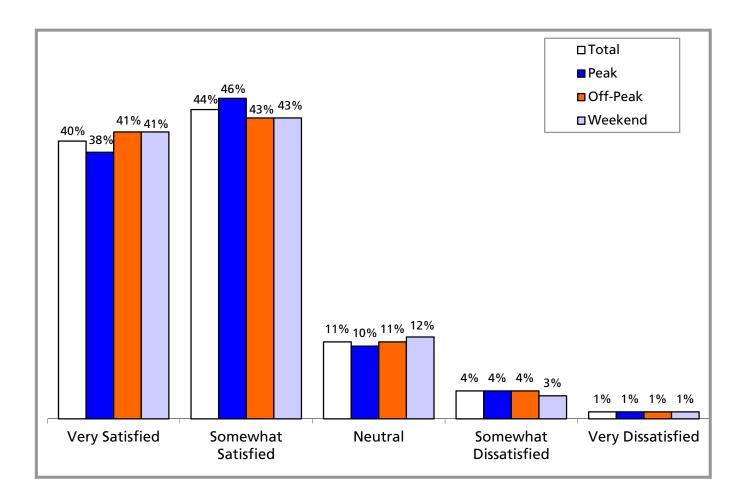

Overall satisfaction measured by those who are **very satisfied** or **somewhat satisfied** has rebounded, from 84% in 2008 to 82% in 2010 and 84% in 2012. This was driven by an increase in those who are **very satisfied**. The dissatisfied percentage has remained very low – in the 5% - 6% range – over the past three surveys.

2012 OVERALL SATISFACTION

(Peak / Off-Peak / Weekend Comparison)

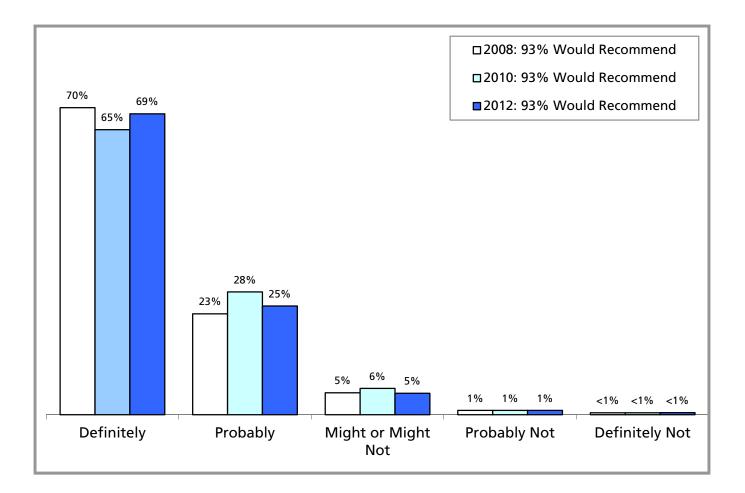

While overall satisfaction is at 84%, there are key differences among customers who ride during different time periods. Peak riders are more likely to be somewhat satisfied (as opposed to very satisfied), while a higher percentage of off-peak and weekend riders say they are very satisfied with BART.

WILLINGNESS TO RECOMMEND BART - TRENDING

(2008 / 2010 / 2012 Comparison)

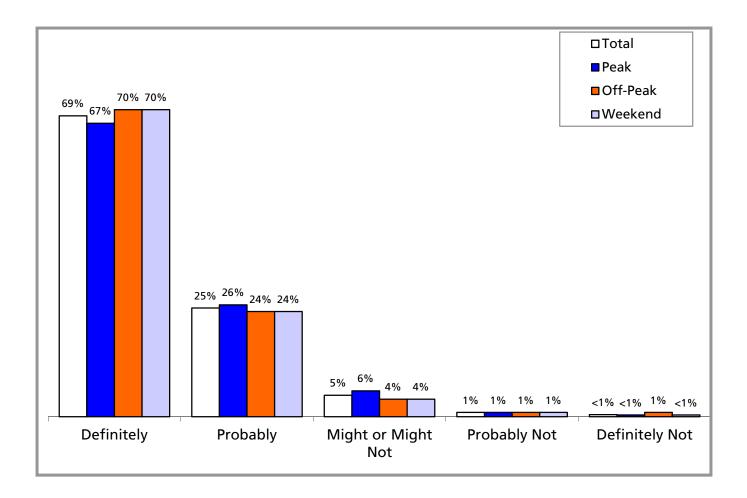

Overall willingness to recommend BART has remained steady at 93% over the last four years. Compared to 2010, there has been an increase in the "definitely" recommend category and a corresponding decrease in the "probably" recommend category.

2012 WILLINGNESS TO RECOMMEND BART

(Peak / Off-Peak / Weekend Comparison)

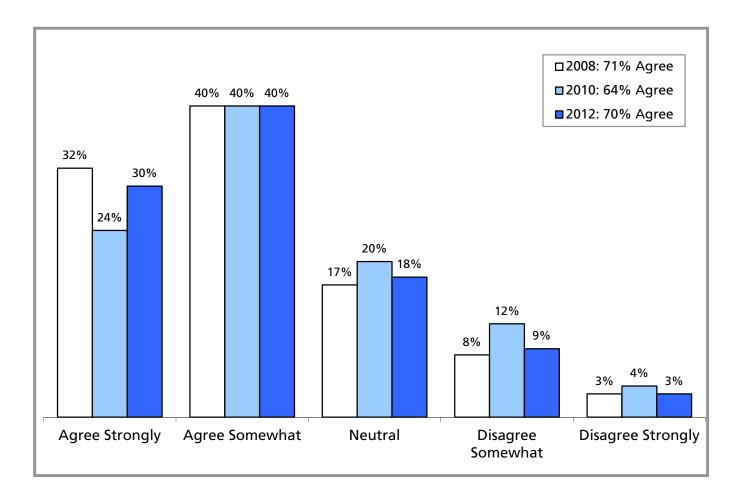

Peak period customers are slightly less likely to definitely recommend BART than off-peak and weekend riders.

PERCEPTION OF BART AS GOOD VALUE - TRENDING

(2008 / 2010 / 2012 Comparison)

The majority of riders see BART as a good value. This rating is considerably higher in 2012 (70%) than in 2010 (64%), and nearly equal to 2008 (71%). Of note is the significant increase since the last survey in those who strongly agree that BART is a good value for the money. The percentage of riders who disagree or are neutral has decreased over this time period.

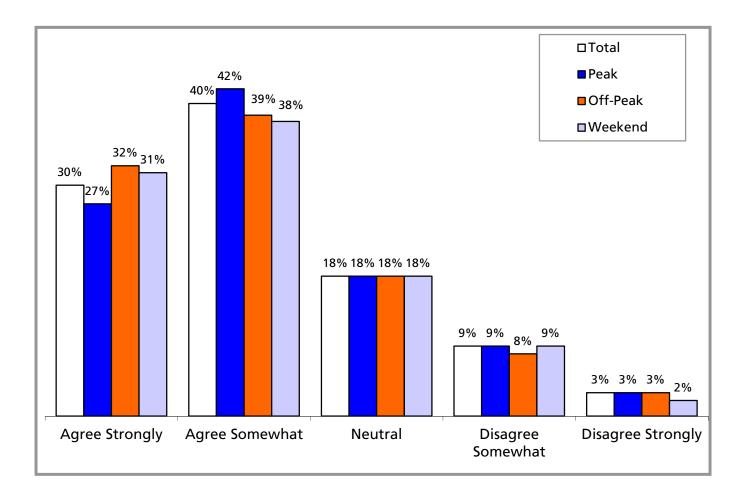

2012 PERCEPTION OF BART AS GOOD VALUE

(Peak / Off-Peak / Weekend Comparison)

Fewer peak period riders strongly agree that BART is a good value for the money than off-peak or weekend customers.

Peak period customers generally ride BART five or more days per week, so the aggregate fares they pay far exceed fares paid by off-peak and weekend customers, who tend to ride less frequently.

SPECIFIC SERVICE ATTRIBUTES

In the 2012 survey, customers rated BART on 48 specific service attributes. The chart on the opposite page shows mean ratings for each of these 48 service attributes. Items appearing towards the top of the chart are rated highest, while items appearing at the bottom are rated lowest. The average rating (on a scale from 1 = Poor to 7 = Excellent) is shown next to the bar for each item. Given the large sample sizes, mean ratings are accurate to within ± 0.05 at a 95% confidence level.

BART received the highest marks for:

- Availability of maps and schedules
- On-time performance
- Clipper cards
- BART tickets
- Timeliness of connections between BART trains
- bart.gov website

BART received the lowest ratings for:

- Restroom cleanliness
- Presence of BART Police on trains
- Presence of BART Police in parking lots
- Condition/cleanliness of seats on train
- Elevator cleanliness
- Enforcement of no eating and drinking policy

For a chart showing the percentage results, please see Appendix D.

2012 RATING OF SPECIFIC SERVICE ATTRIBUTES

Mean Rating (7 point scale)

| | 5 30 |
|---|--------------|
| Availability of maps & schedules | 5.79 |
| On-time performance | 5.72 |
| Clipper Cards | 5.69 |
| BART tickets | 5.54 |
| Timeliness of connections b/t BART trains | 5.46 |
| bart.gov website | 5.44 |
| Timely information about service disruptions | 5.37 |
| Reliability of ticket vending machines | 5.30 |
| Access for people with disabilities | 5.30 |
| Train interior kept free of graffiti | 5.29 |
| Frequency of train service | 5.24 |
| Reliability of faregates | 5.22 |
| Signs w/ transfer/platform/exit directions | 5.19 |
| Length of lines at exit gates | 5.17 |
| Hours of operation | 5.08 |
| Lighting in parking lots | 5.05 |
| Availability of bicycle parking | 5.05 |
| Comfort of seats on trains | 5.03 |
| Stations kept free of graffiti | 5.03 |
| Helpfulness and courtesy of Station Agents | 4.94 |
| Timeliness of connections with buses | 4.94 |
| | |
| Availability of Station Agents | 4.86 |
| Availability of standing room on trains | 4.86 |
| Leadership solving reg'l transport problems | 4.85 |
| Overall station condition | 4.81 |
| Comfortable temperature aboard trains | 4.74 |
| Appearance of train exterior | 4.71 |
| Availability of car parking | 4.68 |
| Elevator availability & reliability | 4.66 |
| Enforcement against fare evasion | 4.65 |
| Personal security in the BART system | 4.64 |
| Escalator availability & reliability | 4.60 |
| Appearance of landscaping | 4.60 |
| Availability of seats on trains | 4.57 |
| Condition/cleanliness of windows on trains | 4.52 |
| Train interior cleanliness | 4.49 |
| Station cleanliness | 4.46 |
| Clarity of P.A. announcements | 4.39 |
| Presence of BART Police in stations | 4.32 |
| Condition/cleanliness of floors on trains | 4.28 |
| Noise level on trains | 4.27 |
| Availability of space for luggage, bicycles, etc. | 4.25 |
| Enforcement of no eating & drinking policy | 4.22 |
| Elevator cleanliness | 4.21 |
| Condition/cleanliness of seats on train | 4.18 |
| Presence of BART Police in parking lots | 4.18 |
| | |
| | |
| Presence of BART Police on trains Restroom cleanliness | 3.84 3.71 |

Among the 45 attributes that can be compared against prior survey results², about half (51%) received lower ratings than in 2010. The chart in the next sub-section shows the percent change in the mean rating from 2010 to 2012. Note that many of these changes are not statistically significant.

Looking at statistically significant changes:

- 11 attributes had statistically significant declines, ranging from -4.6% to -1.1%;
- 10 attributes had statistically significant increases, ranging from 1.1% to 4.7%.
- The remaining 24 attributes are statistically flat as compared to 2010. (Refer to Appendix C for details on statistical significance.)

While cleanliness remains an issue with riders as two of the five attributes with the largest declines in ratings relate to it, there has been improvement in this area since the last survey. (In 2010, four of the five attributes with the biggest declines were related to cleanliness.) Riders are also concerned with escalator and elevator reliability and availability of seats on trains. The ratings with the largest declines are:

- Escalator availability and reliability (-4.6%)
- Elevator cleanliness (-4.1%)
- Station cleanliness (-2.6%)
- Availability of seats on trains (-2.6%)
- Elevator availability and reliability (-2.1%)

Customers' ratings of escalators were impacted by an unusually large number of out-of-service escalators in the months prior to the survey. As many of these escalators were in busy downtown San Francisco stations, the impacts were widely felt. A main factor contributing to the escalator outages is aging equipment – most of BART's escalators are 40 years old and will soon be due for replacement or a major overhaul. Additionally, issues due to weather, vandalism, and homelessness impact escalator availability. Over the summer, BART brought in additional staff and contractors to speed up escalator repair time, resulting in improved escalator availability. In the next five to six years, BART is planning to replace or overhaul the escalators to improve reliability. BART is also exploring building enclosures around the entrances of busy street level escalators. These would protect the escalators from the weather and prevent loitering in station entrances during non-service hours.

The declines in cleanliness are likely related to increased ridership, which puts more stress on the system. BART also has fewer workers to clean its stations today than it did 10 years ago due to budget cuts. In the next budget year, BART plans to dedicate more resources to improving the station environment for customers, including hiring more station cleaners. BART is also currently working with community groups in San Francisco's Civic Center area and Mission District to improve the station / plaza environments in these areas and address issues pertaining to loitering around stations. Specifically relating to elevators, BART has instituted a program in which Station Agents inspect elevators every two hours and catalog the results. Also, BART recently installed signage in the elevators asking customers to alert a Station Agent if there is a cleanliness issue.

The decline in ratings of seat availability is due to the large increase in ridership since the last survey. Compared to the 2010 survey period, BART's average weekday ridership was up 14% in the 2012 survey period. That's an additional 48,000+ passengers on the trains every day. While

²Two attributes added to the 2012 survey ("Clipper Cards" and "BART tickets") can't be compared against 2010 data. Additionally, as "Helpfulness and Courtesy of BART Personnel" was changed to "Helpfulness and Courtesy of Station Agents" on the 2012 survey, this attribute can't be compared against 2010 data.

BART has been modifying its cars to make more room for passengers, this has involved removing some seats to create more open space. Long-term, as BART replaces its fleet with new train cars, it plans to expand the size of its fleet from 669 cars to 1,000 cars. This will result in an overall increase in seat availability, fleet-wide.

BART has made progress on one of the attributes that has been consistently rated near the bottom of the list (noise), on one of the most important attributes to customers (on-time performance), and on one of BART's "target issues" (seat cleanliness – refer to next section for discussion of target issues).

The ratings with the greatest increases are:

- Noise level on trains (+4.7%)
- On-time performance of trains (+2.9%)
- Leadership in solving regional transportation problems (+2.8%)
- Condition/Cleanliness of seats on trains (+2.7%)
- Comfort of seats on trains (+2.4%)

One factor contributing to the improved perceptions of *noise level on trains* is increased rail grinding. BART has been able to improve the availability of both of its rail grinders by making maintenance improvements to the equipment, enabling BART to increase the number of track miles ground. BART continues to explore ways to address track noise. Planned improvements include:

- scheduling rail grinding based on system-wide noise mapping and analysis, allowing BART to concentrate its efforts where they will have the most impact;
- implementing an optimal rail profile to reduce wear and corrugation (ripples on the rail which increase noise).

Long-term, BART is exploring using a different type of door technology for its new train cars, which is expected to noticeably reduce noise levels on trains.

On-time performance, a key driver of overall customer satisfaction, has consistently been among the top three ranked attributes since 2000. With this year's increase, it hit an all-time high rating in terms of customers' perceptions. The improved perceptions track well with BART's actual performance metrics, which also showed an increase in on-time performance statistics between the two survey periods.

Customers tend to think of BART's *leadership in solving regional transportation problems* in terms of BART's overall impact on the region. Since BART carries many thousands of riders, provides fast and frequent service, and covers multiple counties, customers have stated that BART eases traffic and congestion, regional transportation problems. Thus, the increase in this attribute may be related to BART's ridership increase.

The increases in ratings of train seats show that BART's investment in new vinyl seats appears to be paying off. Passengers who were surveyed on trains with vinyl seats gave significantly higher ratings to seat condition/cleanliness than passengers on trains with upholstered wool seats. At the time of the survey, about 25% of the fleet was outfitted with the new seats. As BART continues to replace seats, it is expected that seat ratings will continue to improve.

SERVICE ATTRIBUTE RATINGS: PERCENTAGE CHANGES 2012 vs. 2010 comparisons

| 2012 vs. 2010 comparisons | 2012 | 2010 | | %Change | Statistically Significant at 95% |
|--|------|------|------------|----------|--|

| BART Tickets* | 5.54 | - | - | - | - |
| Clipper Cards* | 5.69 | - | - | - | - |

[^]The % change (mean) is calculated by dividing the difference in means by the 2010 mean. For example, on the "Escalator availability" rating, the 2010 rating is 4.60; the 2012 rating is 4.82. The difference between these two mean ratings is -0.22. So the calculation for the above table is -0.22 divided by 4.82 = -4.6%.

* Not asked in 2010

** In 2010, this attribute was phrased more broadly as "Helpfulness and courtesy of BART Personnel"

QUADRANT ANALYSIS

The chart on the opposite page (titled "2012 Quadrant Chart") is designed to help set priorities for future initiatives to improve customer satisfaction. This chart quantifies how important each service characteristic appears to be from a customer perspective (using the vertical axis) and shows the average customer rating for each characteristic (using the horizontal axis). For a more detailed description of how this chart is derived, see Appendix G.

The vertical axis crosses the horizontal axis at the average (mean) performance rating from the benchmark survey in 1996. This vertical axis has remained in this location in all subsequent surveys so that Quadrant Charts can easily be compared year-to-year.

The "Target Issues" quadrant identifies those service attributes which appear to be most important, but which are rated relatively low by BART riders. Based on the vertical axis used since 1996, the seven target issues include:

- Condition / cleanliness of seats on trains
- Availability of space on trains for luggage, bicycles, and strollers
- Condition / cleanliness of floors on trains
- Station cleanliness
- Car interior cleanliness
- Availability of seats on trains
- Personal security in the BART system

Compared to 2010, there is one new target issue – availability of seats on trains. This is a challenging issue to address in the near term as BART is serving an increasing number of riders with its existing aging fleet. Long-term, however, BART is planning on increasing the size of its fleet from 669 to 1,000 cars, which will increase the overall number of seats.

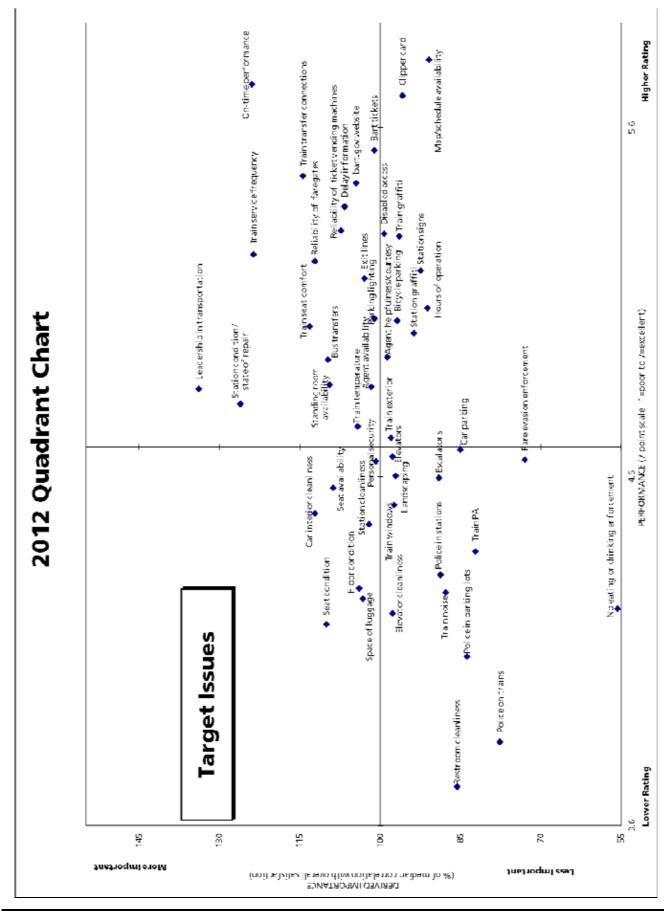

While seat condition and car interior cleanliness remain target issues, they have both shown improvement since 2010. This is most likely due to the investment BART has made in new vinyl seat coverings, which are easier to keep clean.

With regard to station cleanliness, BART anticipates putting increased focus on stations in the next budget year. The appearance and cleanliness of stations should improve with planned heavy-duty cleaning, painting, and the hiring of additional station cleaners.

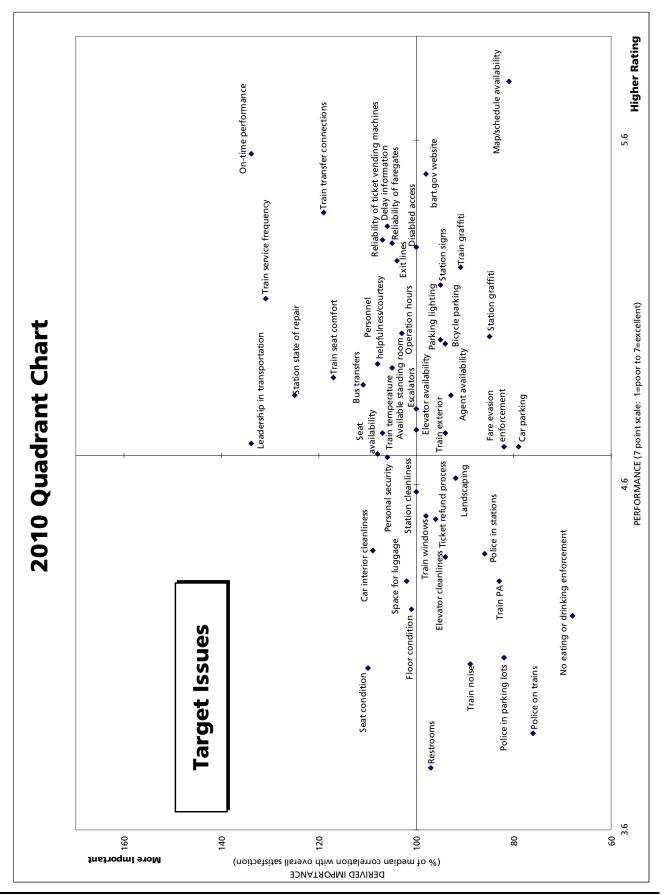

Note that identifying how the above issues can be addressed may be driven by resources available and tradeoffs. In considering strategies to address these items, it will also be important to maintain the ratings for those items in the top right quadrant, particularly on-time performance.

For comparison purposes, the 2010 Quadrant Chart is included after the 2012 chart.

Note: The vertical axis on the opposite page is based on using a mean statistic of 4.685 - the average mean score of all the attributes for the 1996 benchmark study.

2012 BART CUSTOMER SATISFACTION STUDY

This page intentionally left blank.

SATISFACTION TRENDS

The chart on the next page shows the overall satisfaction ratings recorded since the first BART Customer Satisfaction Survey in 1996. The chart is further annotated to show some significant factors impacting customer perceptions and use of BART.

In 1996, 80% of customers were satisfied with BART. Two years later customer satisfaction had dropped to a low of 74%. The events most likely to influence customer satisfaction, which took place in between the two surveys, were a large fare increase (the third since 1995), a work stoppage, and aging equipment. Also, the effects of the renovation program began to be felt during this period. Customer satisfaction often suffers at the beginning of a renovation program because service is impacted by cars, escalators, and elevators being taken off-line.

By 2002, customer satisfaction was back up to 80%, and in 2004, BART registered an all-time high rating of 86%. Factors that increased satisfaction probably included keeping fare increases relatively small, the opening of the extension to the San Francisco International Airport, the introduction of permit parking, and the completion of the renovation program.

The 2006 survey reflects residual effects of these improvements. Other factors in the 2004 to 2006 time period were another small fare increase and a labor settlement without a work stoppage. In 2008, ridership surged as gas prices rose, and a fire in the Hayward train yard in May impacted riders on the Fremont line. However, BART improved train interior cleanliness and increased evening and Sunday train frequency beginning January 1, 2008.

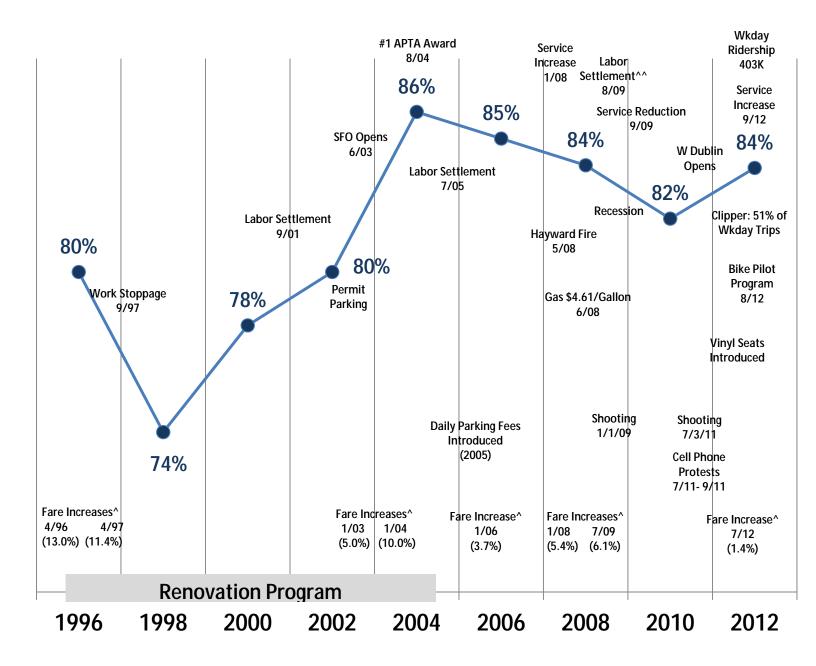

Between the 2008 and 2010 surveys, BART ridership dropped 7% reflecting the impacts of the longest recession since World War II, running from December 2007 through June 2009. Between these two survey periods, unemployment in the three-county BART District rose from 6.3% to 10.6%. BART implemented a 6.1% fare increase in July 2009, six months earlier than anticipated, in order to help close a budget deficit.³ In addition, BART reduced evening and Sunday train frequency in September 2009, effectively reversing the service increase implemented in 2008.

By the 2012 survey period, ridership had skyrocketed, topping 400,000 average weekday trips for the first time in BART's history (an increase of 14% vs. the 2010 survey period). The local economy was recovering (unemployment in the BART District was 8.1%), gas prices were on the rise, and BART customer satisfaction rebounded to 84%. Some factors which may have influenced the increase in customer satisfaction include:

- The replacement of BART's upholstered wool seat coverings with vinyl seat coverings, which are easier to keep clean (completed on approximately 25% of the fleet at the time of the survey);
- Strong on-time performance, a key driver of customer satisfaction;
- An increase in evening service on the Richmond-Millbrae line (four additional trains in each direction between 7 p.m. and 8 p.m.);
- A relatively small fare increase of 1.4% in July 2012 (the smallest fare increase in BART's history).

³ The 7/09 fare increase of 6.1% does not include the minimum fare increase (+\$0.25) or the SFO premium fare increase (+\$2.50).

SATISFACTION TRENDS: 1996 - 2012

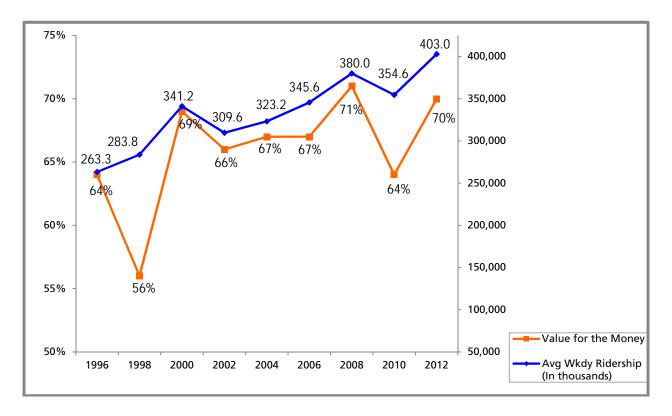

^ Percentages shown reflect average fare increases. The 2006 fare increase of 3.7% does not include an additional \$0.10 capital surcharge. The 7/09 fare increase of 6.1% does not include the minimum fare increase (+\$0.25) or the SFO premium fare increase (+\$2.50).

^^ Work stoppage announced, but averted in 8/09.

VALUE TRENDS AND RIDERSHIP

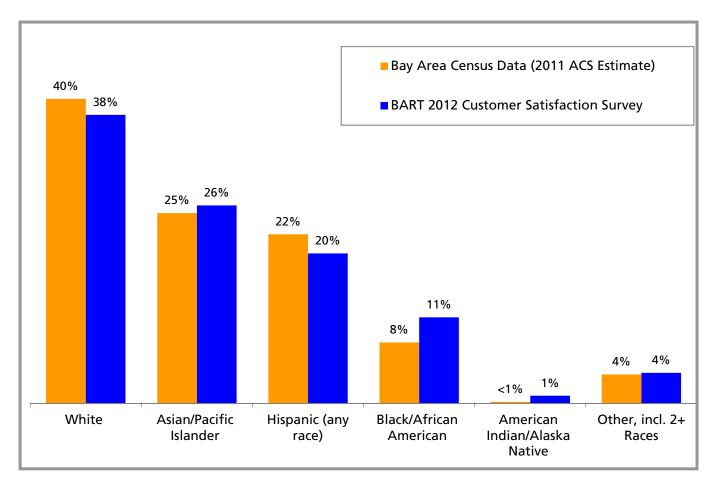

The chart below shows overall value ratings since 1996 on the primary axis. Average weekday ridership figures for September of each year (in thousands) are shown on the secondary axis.

It is interesting to note that perceptions of value and average weekday ridership levels are correlated. That is, in many years, increases in value ratings are accompanied by increases in ridership, while decreases in value ratings are accompanied by decreases in ridership. Note that this does not prove causation, and there are other factors that influence both value ratings and ridership, such as the state of the economy and gas prices.

BART CUSTOMER ETHNICITY COMPARED TO REGIONAL DATA

BART customers' ethnicities reflect the diversity of the Bay Area.

Sources:

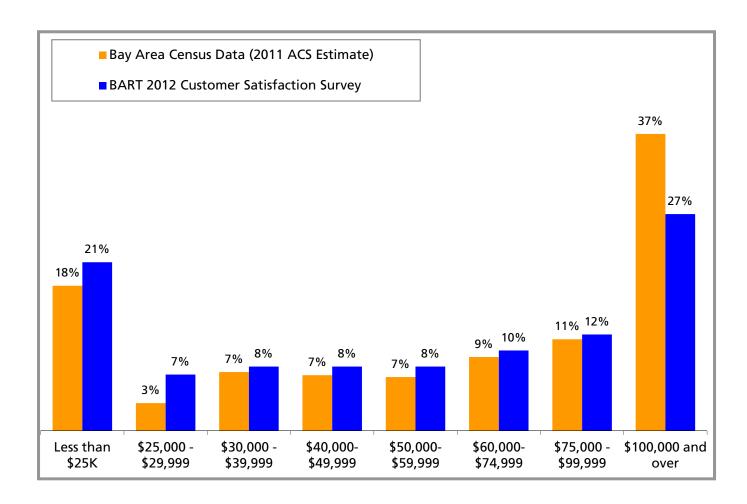

- U.S. Census Bureau, 2011 American Community Survey 1-Year Estimates: Table C03002 "Hispanic or Latino Origin by Race." Universe: Total Population. (http://factfinder2.census.gov)
- BART 2012 Customer Satisfaction Survey

Notes:

- 1) The ACS 2011 estimates shown only include data for the four counties within BART's service area: Alameda, Contra Costa, San Francisco, and San Mateo. Census tables adjust for unit non-response by weighting at the tract-level.
- 2) The categories shown in this chart classify respondents based on single vs. two-plus race and Hispanic vs. non-Hispanic. The categories "White," "Black/African American," "Asian/Pacific Islander," and "American Indian/Alaska Native" only include respondents who reported a single race and are non-Hispanic. All two-plus race, non-Hispanic responses are included within "Other." All Hispanic responses are included within Hispanic, regardless of race. Note that ethnicity data are categorized differently in other charts within this report, so the percentages shown will differ.
- 3) The BART data distribution is based on 6,531 responses and excludes 3% non-response.
- 4) In order to maintain comparability with prior years' BART data, those who responded to the ethnicity question but skipped the Hispanic question are included within the non-Hispanic race categories.
- 5) Totals may not add to 100% due to rounding.

BART CUSTOMER INCOMES COMPARED TO REGIONAL DATA

BART customers' household incomes approximately track regional household income distribution; however, there are notable differences at the lowest and highest income categories.

Sources:

- U.S. Census Bureau, 2011 American Community Survey 1-Year Estimates: Table B19001 "Household Income in the Past 12 Months." Universe: Households. (http://factfinder2.census.gov)
- BART 2012 Customer Satisfaction Survey

Notes:

- 1) The ACS 2011 estimates shown only include data for the four counties within BART's service area: Alameda, Contra Costa, San Francisco, and San Mateo. Census tables adjust for unit non-response by weighting at the tract-level.
- 2) The BART data distribution is based on 6,070 responses and excludes 9% non-response. Note that other tables within this report include non-response, so the percentages shown will differ.
- 3) Totals may not add up to 100% due to rounding.

Appendix B: COMPLETE TABULATIONS

Note: "No Answer/NA" includes question non-response unless otherwise indicated.

Percentages were rounded up at the 0.5% level (if 0.5% or above, the percentage was rounded up; if 0.4% or below, the percentage was rounded down). Columns may not add to 100% due to rounding.

This page intentionally left blank.

TIME ENTERED THE BART SYSTEM FOR THIS TRIP

2. About what time did you get on this train?^

| | | — Total — | |
|-------------------------|-------|-----------|-------|
| | 2008 | 2010 | 2012 |
| Base: (All Respondents) | 6,216 | 5,804 | 6,700 |
| | (%) | (%) | (%) |

| 12 noon– 4 pm | 17 | 16 | 17 |
| 4 pm – 7 pm | 32 | 33 | 34 |
| After 7 pm | 8 | 10 | 12 |
| Don't Know/No answe | r 1 | 3 | 2 |
| | 100 | 100 | 100 |

The following time distribution includes both weekday and weekend survey periods.

 $^{\circ}$ Note this question was modified in 2010, so the 2008 data are not directly comparable. Prior to 2010, the question was phrased as "What time did you enter the BART system for this trip?" Respondents selected a response from predetermined time categories. In 2010, the question wording was modified, and respondents wrote in exact times. When these exact times were categorized, some modifications were made to avoid overlap (9:01 am - 12 noon, 12:01 pm - 4 pm, and 4:01 pm - 7 pm).

BART STATION ENTERED AND EXITED

- Which BART station did you enter before boarding this train?
 At which BART station will you exit the system?

The following charts show BART stations entered by survey participants and BART stations at which they planned to exit.

^ This question was not asked in 2008.

TRIP PURPOSE (Multi-Year Comparison)

5. What is the primary purpose of this trip?

The majority of BART riders are commuting to or from work, particularly during the weekday peak period. On weekends, the most common trip purposes are commuting to/from work or visiting family/friends. (Refer to the next page for trip purpose by time period.)

| _ | | — Total — | |

OTHER MODE COULD HAVE UTILIZED

6. If BART service were not available, how would you make this trip?^

- Seventeen percent would not make the trip if BART were not available.
- Forty-eight percent could have driven (by themselves or in a carpool) instead of taking BART.
- Thirty-four percent could have utilized a bus or some other form of public transit.

Note: Although not asked for, multiple mentions were accepted, so columns may not add to 100%.

^ In 2008 and 2010 this question was worded: "What other type of transportation could you have used instead of BART for your trip today?"

° Choice not offered on that year's survey.

CLIPPER / TRANSLINK USE

7. Did you use a Clipper / TransLink Card to pay the fare for this BART trip?

- More than half of all riders used Clipper to pay for their trip.^
- Peak period riders are more likely to have used a Clipper card, while weekend riders are less likely to have used one of the cards.

| | ——— Total ———— | |
|-------------------------|----------------|--|
| | 2012 | |
| Base: (All Respondents) | 6,700 | |
| | (%) | |
| Yes | 55 | |
| No | 44 | |

| Νο | 38 | 47 | 58 |
| Don't Know/No answer | 1 | 1 | 1 |
| | 100 | 100 | 100 |

Data from 2010 are not shown as the question was reworded due to the elimination of the EZ Rider card for fare payment. In 2010, the question read, "Did you use an EZ Rider or Clipper / TransLink Card to pay for this BART trip?"

^Note that the percentage of surveyed riders using Clipper is slightly higher than actual Clipper usage on BART in September 2012 (55% vs. 51%). This may be due to survey respondents responding in the affirmative if they have a Clipper card, even if they did not use the card for the surveyed trip.

FARE

8. What type of fare did you pay for this BART trip?^

- About seven out of ten riders pay the regular fare.
- Usage of the high-value discount fare has declined since 2010, most likely due to limited availability of high-value discount paper tickets. (The discount is available on Clipper Cards.)
- Usage of the high-value discount fare is highest among peak riders.
- On weekends, most riders pay the regular fare.

^ This question was modified on the 2010 survey. In 2008, the question asked, "What type of ticket did you use to enter the BART system on this trip?"

^{^^} In order to compare 2008 with 2010, the 2008 data for High Value Discount and EZ Rider were combined.

(EZ Rider was listed as a ticket type choice in 2008, but not in 2010, when it was included in a separate question.) Additionally,

"Child" was listed as a ticket type on the 2008 survey, but not on subsequent surveys. In the above tables, "Child" is included in the "Other" category.

HOW TRAVELED BETWEEN HOME AND BART

9. How did you travel between home and BART today?

- Nearly one third of riders walk to BART.
- Five percent of riders bicycle to BART, an increase of one percentage point since 2010. This increase has occurred in the off-peak period.
- Peak riders are more likely to have driven alone to BART than riders in other time periods.

WHERE PARKED/FEE

9A. Where did you park? 9B. What fee, if any, did you pay?

- The number of riders who park in BART lots has remained relatively constant since 2008.
- As might be expected, more peak riders pay for monthly reserved parking than riders in other time periods.

SEATING AVAILABILITY

15. After you boarded the train for this trip, did you stand because seating was unavailable?

- About one in four had to stand because seating was unavailable.
- Among those who had to stand, 44% had to stand for the whole trip.
- Peak hours had the highest percentage of standees.

^ This question was modified in 2010 to conform with wording on the 2010 US Census. On the 2008 survey, the question was phrased as "Are you Spanish, Hispanic, or Latino?"

Note: Multiple responses were accepted, so columns will not add to 100%. Reported percentages for ethnicity and Hispanic origin are <u>not</u> exclusive, e.g., a respondent who indicates she is White and Hispanic is included in both categories. The ethnicity data on the next page are categorized differently, so the percentages shown will differ.

BART CUSTOMER ETHNICITY COMPARED TO REGION

BART Customer Ethnicity Compared to Bay Area Counties in BART's Service Area

- BART customer ethnicities reflect the diversity of the region.
- The following table compares the reported ethnicity of BART riders (excluding no response) to the 2011 American Community Survey Estimates.

| Population | ALAMEDA 1,529,875 % | CONTRA COSTA 1,066,096 % | SAN FRANCISCO 812,826 % | SAN MATEO 727,209 % | FOUR- COUNTY TOTAL 4,136,006 | BART 2012 CUST. SAT. SURVEY 6,531 % |

Race and Ethnicity BART Compared to Bay Area Counties in BART's Service Area

Sources:

 U.S. Census Bureau, 2011 American Community Survey 1-Year Estimates: Table C03002 "Hispanic or Latino Origin by Race." Universe: Total Population. (http://factfinder2.census.gov)

BART 2012 Customer Satisfaction Survey

Notes:

- 1) The ACS 2011 estimates shown only include data for the four counties within BART's service area: Alameda, Contra Costa, San Francisco, and San Mateo. Census tables adjust for unit non-response by weighting at the tract-level.
- 2) The categories shown in this table classify respondents based on single vs. two-plus race and Hispanic vs. non-Hispanic. The categories "White," "Black / African American," "Asian/Pacific Islander," and "American Indian/Alaska Native" only include respondents who reported a single race and are non-Hispanic. All two-plus race, non-Hispanic responses are included within "Other." All Hispanic responses are included within Hispanic, regardless of race. Note that ethnicity data are categorized differently in other charts within this report, so the percentages shown will differ.

3) The BART data distribution is based on 6,531 responses and excludes 3% non-response.

- 4) In order to maintain comparability with prior years' BART data, those who responded to the ethnicity question but skipped the Hispanic question are included within the non-Hispanic race categories.
- 5) Totals may not add to 100% due to rounding.

ENGLISH PROFICIENCY

17. Do you speak a language other than English at home? 17a. If "Yes," how well do you speak English?

• Four in ten riders speak a language other than English at home.

*Less than 1%

- Zero

^As the survey methodology is based on surveying riders who are at least 13 years of age, completed questionnaires from riders ages 12 and younger were removed from the database in 2012.

^^ While both the 2008 and 2010 survey instruments offered this choice, the reports for these years combined the "45-54" and the "55-64" choices as "45-64" to allow comparison to the 2006 report, where the survey instrument offered only "45-64."

INCOME

20. What is your total annual household income before taxes?^

- Nearly one-fourth of BART riders have household incomes of \$100,000 or more.
- Peak riders are more affluent than other riders.

| | | Total | | |

Data from prior years are not shown as the question was not asked on prior surveys.

RATING BART ON SPECIFIC ATTRIBUTES

22. Please help BART improve service by rating each of the following attributes. "7" (excellent) is the highest rating, and "1" (poor) is the lowest rating. You can use any number in between. Only skip attributes that do not apply to you.

| POOR | | | | | EXCEI | LENT |
|------|---|---|---|---|-------|------|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 |

NOTE: "7" is the highest rating a respondent can give and "1" is the lowest. Blank and "don't know" responses were eliminated when calculating the arithmetic mean.

^In 2010, this attribute was more broad, phrased as "Helpfulness and courtesy of BART Personnel"

Appendix E: DESCRIPTION OF METHODOLOGY AND RESPONSE RATE SUMMARY

This page intentionally left blank.

DESCRIPTION OF METHODOLOGY

FIELD PROCEDURES

In total, 12 interviewers worked on the 2012 study. The interviewer training session was conducted at Corey, Canapary & Galanis' (CC&G) office in San Francisco on Friday, September 7, 2012, and the field interviewing was conducted from September 8 through September 21, 2012.

Interviewers, for the most part, worked in crews of two. In addition to the interviewers, roving supervisors also worked on the project.

Interviewers boarded randomly pre-selected BART trains and distributed questionnaires to all riders on one pre-determined BART car (also randomly selected). These interviewers rode nearly the whole route of their designated line (origination/destination stations were generally Balboa Park, Castro Valley, Concord, El Cerrito Plaza, South Hayward, San Francisco International Airport, and Millbrae)⁴, continually collecting completed surveys and distributing surveys to new riders entering their car.

The questionnaires were available in English, Spanish, Chinese, Vietnamese, and Korean. In 2010, it was noted that there was a decrease in the percentage of non-English language surveys received as compared to 2008. In 2012, in order to allow more time for limited English proficient riders to complete surveys, 19 runs were extended to the ends of the lines. Additionally, interviewers wore a badge (a copy of which was also on the back of their clipboards) that said in the respective languages: "I have surveys in English, Spanish, Chinese, Vietnamese, and Korean." In 2012, 221 non-English language surveys were completed, representing 3.3% of total surveys (unweighted). This is up from 2010, when 126 non-English language surveys were completed (2.2% of total surveys).

Tallies were kept for questionnaires taken home with riders to be mailed back and for all nonresponses (refusals, language barrier, children under 13, sleeping, and left train). The definitions for non-responses are:

- Language Barrier Non-response because a questionnaire is not available in a language understood by the rider.
- Left Train The surveyor was unable to offer a questionnaire to a rider because of the short distance of that rider's trip.
- Children under 13 Children under 13 are not eligible for the survey.
- Sleeping Sleeping riders are not offered a questionnaire.
- *Refusals* Riders unwilling to accept/fill out the survey.

Interviewers returned completed questionnaires to the CC&G office within 24 hours of interviewing (except weekend crews, who returned their questionnaires Monday morning). All surveys collected during a run were collated together into batches. During this process, coding of answers was completed and surveys were individually examined to verify completeness and age of the respondent. Incomplete surveys and surveys from respondents under 13 years of age were removed. Data from the surveys were then input into a database.

⁴Nineteen runs were extended to the ends of the lines to allow more time for survey completion. On these runs, the origin/destination stations included Richmond, Fremont, and Daly City.

DESCRIPTION OF METHODOLOGY (continued)

During the editing process, an omission was discovered on the Spanish language version of the questionnaire. On question 6 ("If BART service were not available, how would you make this trip?"), the "carpool" option was not listed. Those who wrote in "carpool" under "other" were coded as such; however, the fact that it was not listed as a separate option may have led to under-reporting of potential carpoolers among those completing Spanish language questionnaires. As Spanish language questionnaires account for a relatively small percentage of total weighted questionnaires (1.8%), the impact of this omission on the overall results is minimal. For example, if the carpool percent on the Spanish questionnaires would have been much higher (12%, instead of 2%) were it listed as a separate option, the overall carpool percent would only increase by 0.2% from 12.4% to 12.6%.

Following inputting, randomly selected batches were pulled and reviewed for quality assurance. All of the surveys in the selected batches were compared to the data input for all questions to verify the accuracy of editors, coders, and data entry staff. A total of 766 surveys were reviewed in this manner (11% of all surveys). An additional 9% of surveys were checked for data input on the key questions only (questions 12, 13, and 14).

SAMPLING

Sampling was achieved by selecting BART train trips that most closely resembled trains selected for the 2010 study. The resulting sample of BART trains fell within three strata: peak, off-peak and weekend. Peak is defined as weekday trains dispatched between 5:30 am - 8:30 am and 3:30 pm - 6:30 pm. Off-peak includes trains dispatched all other weekday times. Weekend includes all trains dispatched on Saturday or Sunday.

Once all train selections were made, each trip (train run) was matched with an appropriate return trip on the same line. (For the few cases where a return trip was not available, it was treated as a one-way trip, and no return trip was assigned.) For each trip, one train car was randomly selected for interviewers to board. Interviewers attempted to survey all car riders through the destination station. This random car selection process resulted in a slight bias towards shorter trains. Riders on shorter trains had a higher likelihood of being selected than those on longer trains. In previous years, analysis has been performed on this issue and has demonstrated that this bias has no material effect on the results. The number of outgoing and returning trips totaled: Peak – 38 trips, Off-Peak – 58 trips, Weekend - 43 trips.

DESCRIPTION OF METHODOLOGY (continued)

WEIGHTING

The data were weighted by ridership segment to proportionately represent BART riders. The weighted ridership segments are defined identically to the sampling ridership segments except that weekend is broken into Saturday and Sunday. The resulting ridership segments are as follows: weekday peak, weekday off-peak, Saturday, and Sunday. The following chart shows the actual number of interviews by ridership segment and the number of interviews weighted to represent the proportional amount of riders in each. It also shows the number of riders the weighting is based on, as well as the percentage of riders these numbers represent (weighting %).

| | Weekday Peak | Weekday Off-peak | Saturday | Sunday | Weekly Total |
|-------------------------------|-----------------|---------------------|----------|---------|-----------------|
| Interviews completed | 2,341 | 2,514 | 860 | 985 | 6,700 |
| Interviews weighted by strata | 3,217 | 2,499 | 588 | 397 | 6,700 |
| Estimated # of BART riders* | 1,138,344 | 884,218 | 208,003 | 140,452 | 2,371,017 |
| Weighting % | 48.01% | 37.29% | 8.77% | 5.92% | 100% |

* Estimated number of BART riders taken from ridership averages for the week of September 8 –September 14, 2012. Weekday numbers include five weekdays.

ROUNDING

Beginning with this study, a new rounding protocol was developed. In previous years, percentages were rounded to a tenth of a percent first, prior to rounding to a whole percentage. For example, a percentage of 16.4555261% would have been rounded to 17%. Beginning with the 2012 data, percentages are rounded up or down using seven places after the decimal point. For example, a percentage of 16.4555261% is rounded to 16%. For the most part, this change has only been made for the 2012 data shown in this report.⁵

⁵ Data for the three key tracking questions for 2008 and 2010 were reviewed and adjusted as needed based on the new rounding protocol.

2012 BART Customer Satisfaction Study Response Rate / % of Riders Who Completed Survey / Distribution Rate

| | Total | Peak | Off-Peak | Weekend |
|--|--------|-------|----------|---------|
| Children under 13 | 155 | 34 | 43 | 78 |

Appendix F: CODING OF RESPONDENT COMMENTS

This page intentionally left blank.

CODING OF RESPONDENT COMMENTS

EDITING AND CODING

This section outlines editing and coding procedures utilized on the 2012 BART Customer Satisfaction Study. For the most part, information as provided by the respondent on the self-administered questionnaire was entered as recorded.

Editing procedures, where disparities occurred, were as follows:

Scaling Questions

- If multiples occurred where only one response was acceptable (e.g., both 5 and 6 circled on the Poor Excellent scale or Agree Strongly and Agree Somewhat both checked), the answer input alternated between the higher and lower responses. On the first occurrence we took the higher response, and on the next occurrence we took the lower response, etc.
- In cases where bipolar discrepancies were observed (e.g., both 1 and 7 circled) the midpoint was used. Sometimes respondents would include notes like poor in this respect and excellent in another respect for a specific attribute.

The back side of the questionnaire included a section for comments. Overall, 1,793 respondents, or 27% of all respondents, provided comments. All of these written comments were typed into a database. The comments were then split and coded using a list of "department specific" codes provided by BART. The code list and incidence for each code are listed on the following page. A total of 2,481 comments were tabulated and coded.

The verbatim comments for each code are made available to the BART departments responsible for each area. This provides them with an additional tool to understand the reasons for customer rating levels.

2012 Customer Satisfaction Study Code Sheet – Comment Code Frequencies

[FREQUENCIES FOR EACH ARE INDICATED IN BRACKETS]

- 1 Agent Availability [4]
- 2 Bus Connections/Muni Connections/Caltrain Connections [12]
- 3 Bike Issues [130]
- 4 General compliments [228]
- 5 Disability / Senior issues [31]
- 6 Escalators and elevators (except cleanliness) [33]
- 7 Extensions [46]
- 8 Fares and Fare Policies [188]
- 9 Graffiti [3]
- 10 Overall Train/Track Maintenance/Conditions (not including noise, windows, or cleanliness) [24]
- 11 Lighting [4]
- 12 Other specific comments [13]
- 13 Announcements and PA (Public Address System) issues [34]

- 52 Train noise [50]
- 53 Computer/Internet/Wi-Fi/Web site [19]
- 54 Oscar Grant shooting/Charles Hill shooting [17]
- 40 Other [41]

Appendix G: QUADRANT CHARTS BY RIDERSHIP SEGMENT

This page intentionally left blank.

QUADRANT CHARTS BY RIDERSHIP SEGMENT

The chart titled "2012 Quadrant Chart" (See "Detailed Results") is designed to help set priorities for future initiatives to improve customer satisfaction. It identifies those specific service attributes that are most important to BART customers on average and also shows which service attributes rate lowest. The "Target Issues" quadrant (top left) displays the most important service attributes in need of attention.

Values along the horizontal axis are average ratings. Customers marked their ratings on a scale of 1 = poor and 7 = excellent, so higher ratings on the right side of the Quadrant Chart are better scores and those on the left side are worse. The vertical axis ("Derived Importance") scale was derived by correlating each of the service attributes with customers' overall satisfaction levels. Those service attributes having strong correlations with overall satisfaction are seen as "More Important," while those with weaker correlations are seen as "Less Important."

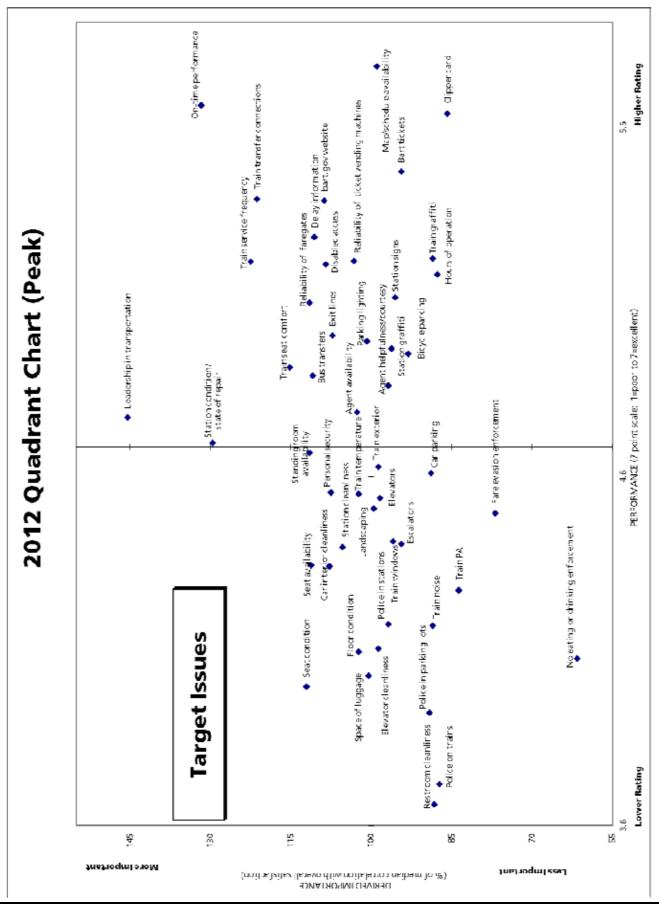

For example, customer ratings of on-time performance are very strongly correlated with overall satisfaction (i.e., customers that are happy with BART's on-time performance tend to be more satisfied overall, and conversely customers that are disappointed with on-time performance tend to be less satisfied overall). On the other hand, customer ratings of map/schedule availability have only a weak correlation with overall satisfaction (i.e., it is not uncommon for customers to rate map/schedule availability highly, even though they are dissatisfied overall with BART services). Therefore, on-time performance is located in the upper part of the chart, while map/schedule availability is located in the lower part.

Specific values along the vertical axis are derived by calculating ratios between correlation coefficients for each service attribute and the median correlation level. Those service attributes above 100 are more correlated with overall satisfaction, while those below 100 are less so.

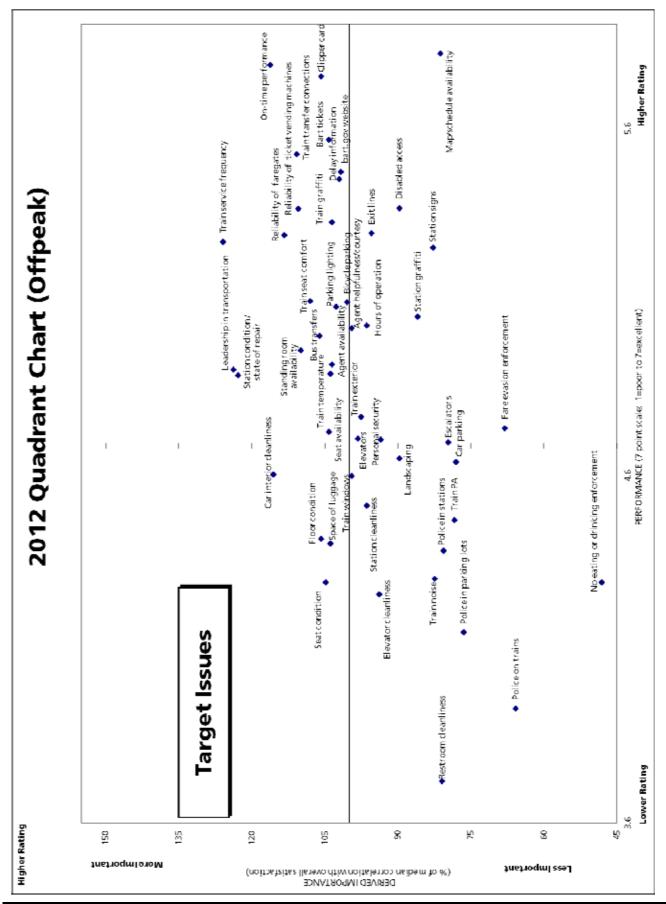

Note that some service attributes are seen as fairly unimportant on average because not all customers are affected by them, even though they are quite important to specific customer segments (e.g., parking availability, elevator cleanliness, restrooms, and bicycle parking).

Also, note that more sophisticated statistical tests, utilizing factor and regression analyses, were done for the 1996 and 1998 Customer Satisfaction reports. This testing was not done in subsequent years as the results of the additional analyses were generally consistent with the correlation coefficient-based analysis used in the Quadrant Chart. Please refer to the 1998 Customer Satisfaction report for information on additional statistical testing done in past years.

The following pages show the Quadrant Charts for each of the three sample ridership segments: peak, off-peak, and weekend riders.
