Construction Notification #004

Pile Driving and Start of Maintenance & Storage Facility Construction

May 2011

Beginning May 23, crews will begin construction of the Oakland Airport Connector (OAC) Maintenance & Storage Facility on BART property near the intersection of Hegenberger and Airport Access roads. The Maintenance & Storage Facility will house drive machinery for the system as well as vehicle maintenance, system control and administrative facilities.

Large equipment needed to construct the facility will begin arriving on site as early as May 18. As part of the work, pile driving to provide foundation support for the building will be required and will involve driving precast concrete piles into the soil with a large impact hammer. The work activities will include, but are not limited to:

- Delivery of a 175-foot pile driving crane and other large equipment and materials
- Driving concrete piles
- Clearing the work area, including cutting of concrete, jackhammering, and tree removal
- Monitoring noise and vibration levels

Pile driving work will produce noise and vibrations in the immediate area. All efforts will be taken to minimize noise, vibration, and other disruptions to the community. Please watch for notices regarding future construction activities and signs with safety information. We appreciate your patience and cooperation during this work.
