Ride BART to a satisfying career that lets you make a difference in the San Francisco Bay Area. BART is the 5th busiest passenger rail system in the nation. BART provides quality service while operating on an asset base that integrates trend setting technology with 43 year old infrastructure.

BART is looking for Engineering professionals who love to solve complex engineering problems, work in a fast paced environment and have a passion for connecting more than 430,000 daily riders to work, school, and other places they need to go. Join the Engineering Revolution to Build a Better BART!

The Engineering organization plays an essential role in the improvement of BART's infrastructure by driving capital projects and ensuring assets maintain high operational reliability. BART engineers are maintenance and construction friendly team players whether working in design, analysis or process improvement areas.

About 30% of BART's engineering workforce is projected to retire over the next 4 years. Concurrently, the system is expanding daily, so we plan to continue hiring additional roles throughout the department.

BART offers one of the most comprehensive compensation and benefits programs you will find anywhere. Benefits include the renowned CalPERS pension, medical, vision, and dental coverage, supplemental insurances, paid holidays and vacation, as well as two investment programs, one of which is entirely funded by BART on your behalf. BART also saves you money in your paycheck, because no deductions are made for Social Security.

If you are a creative problem solver with a passion for channeling your considerable technical skills to advancing BART's infrastructure performance, then apply to join the team today. Take advantage of the job alert feature on BART's website to be notified as additional postings open up.
