Appendix A | Collision Maps

This appendix provides maps that indicate locations of reported motor vehicle collisions with pedestrians or bicyclists around each of the 17 Focus Stations over a three-year period. The most current datasets available at the time of each Focus Station site visit were used: ten used data from 2013, 2014 and 2015, while seven used 2015, 2016 and 2017 data (see Table A.1).

This appendix provides maps for each Focus Station area that indicate the home origins of weekday BART riders that also show the mode each uses to access the station. The source of this information is the BART’s 2015 Station Profile Study, which was based on surveys of BART passengers.

Note for all maps: The data shown on these maps was weighted to represent average weekday ridership and is shown scattered around actual origin point. The “Drive alone / carpool” category includes motorcycle; “Drop off / taxi / other” includes app-based ridesharing services like Uber and Lyft.
